

## An Enterprise Physics Approach for Evolution Support in Heterogeneous Service-Oriented Landscapes

**Tiziana Margaria**

Chair Service and Software Engineering

**Bernhard Steffen**

Chair Programming Systems

## Overview

- Enterprise Physics
- The Mediation Scenario
- Handling Evolution
- Observations

T. Margaria, B. Steffen

3gERP, 17.11.2008

## Enterprise Physics...

- Constrained by laws, standards, contracts, policies, legal codes, regulations
- Constrained by available resources, services, time,
- "Attracted" to the company's and individual goals

*Go where allowed -  
and if more alternatives are possible,  
choose where preferred*

## Enterprise Physics...

Easy for the many, difficult for the few

Finding adequate domain modelling formalisms  
that help taming the complexity of  
service orchestration and service discovery.

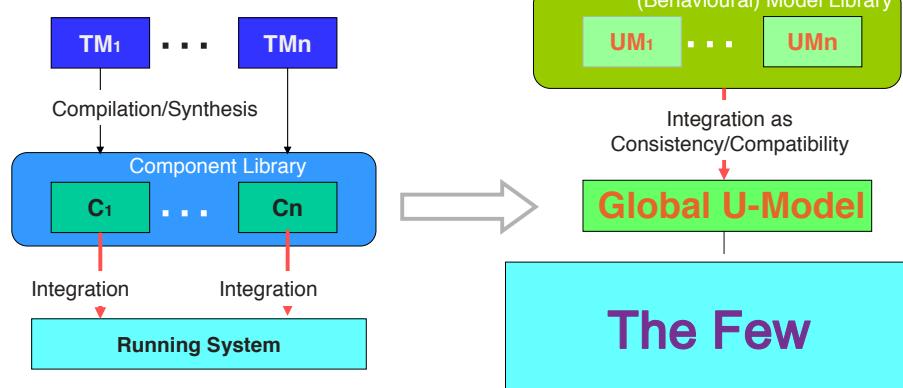

Declarative and robust

VSTTE 2005: From the How to the What

(Composition and matchmaking)

# Extreme Model Driven Design For the Many - Everybody

Component Based Design

T. Margaria, B. Steffen

3gERP, 17.11.2008

# A new Rational Mechanics?

- Business Objects, e.g. line items and orders, comparable to things in the physical reality like atoms, molecules, or larger compound bodies,
- Services, e.g. ordering or order confirmation, that act upon or happen to them, comparable to chemical reactions, motion, or deformation.
- Constraints (relations, laws)
- Minimality (minimal energy states)
  - preferences, cost functions,...

T. Margaria, B. Steffen

3gERP, 17.11.2008

# A new Rational Mechanics?

- Business Objects, e.g. line items and orders, comparable to things in the physical reality like atoms, molecules, or larger compound bodies,
- Services, e.g. ordering or order confirmation, that act upon or happen to them, comparable to chemical reactions, motion, or deformation.

Described abstractly

~ semantically

local (compatibility) constraints } properties and  
use of taxonomies relations

T. Margaria, B. Steffen

3gERP, 17.11.2008

# A new Rational Mechanics?

- Constraints (relations, laws)
  - global constraints similar to physics' (electromagnetic or gravitational) fields and boundary conditions.
  - entire scenario, entire evolution
  - German data protection laws, business rules, ...
- Minimality (minimal energy states)
  - preferences, cost functions,...
  - equilibrium

T. Margaria, B. Steffen

3gERP, 17.11.2008

3gERP, 17.11.2008

# Model-driven Solution

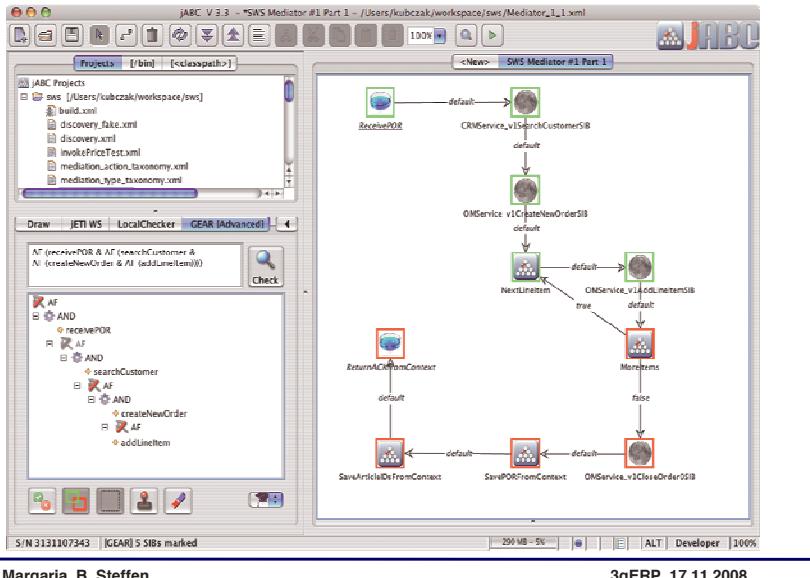

1. Generate SIBs from Moon's WSDL descriptions of the Legacy System
2. Model Mediator orchestration in jABC (SLG)
3. Generate web service out of SLG
4. Use generated web service with RosettaNet Client

T. Margaria, B. Steffen

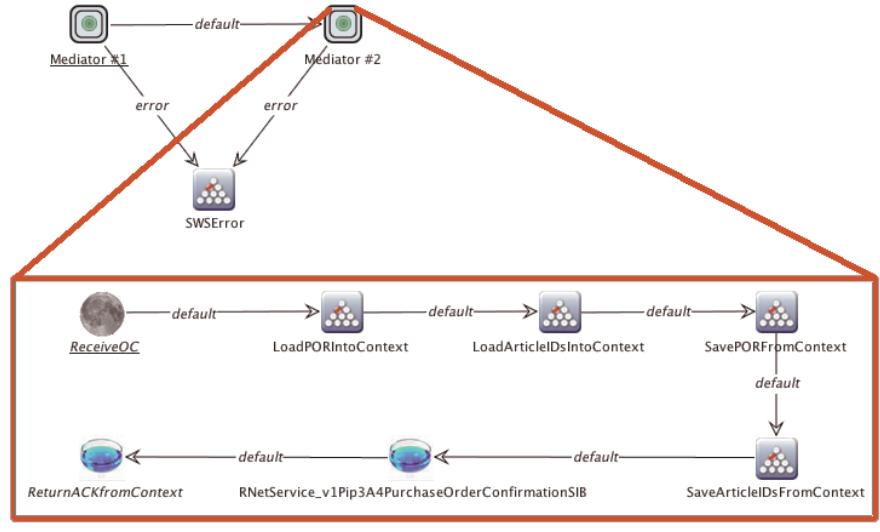

3gERP, 17.11.2008

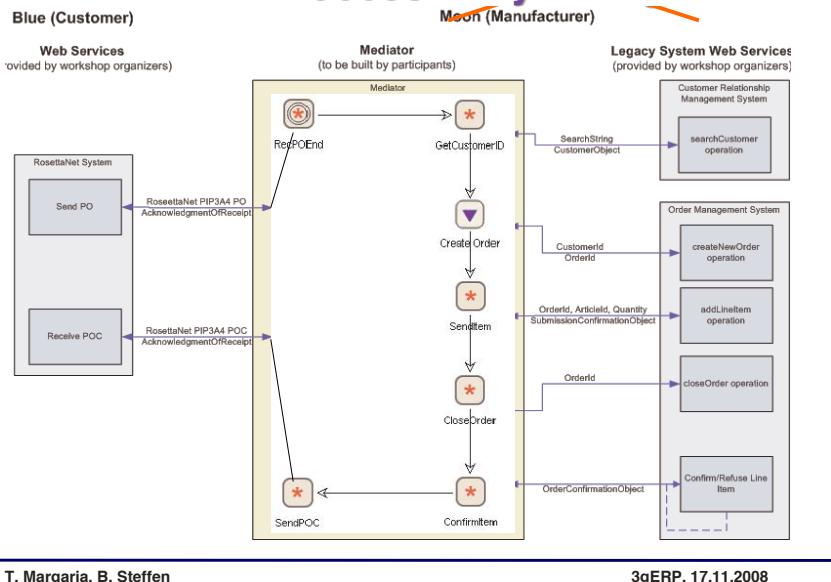

## Mediator Service 1 (POR)

## The Running Orchestration

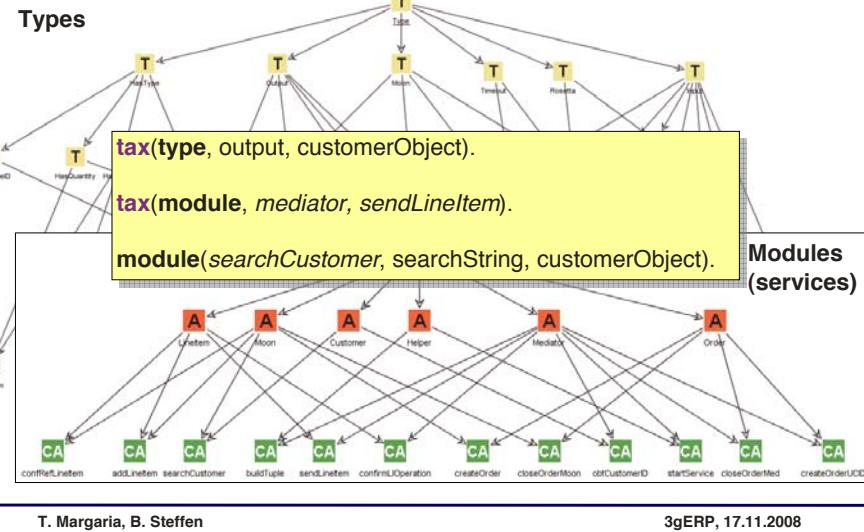

## Process Synthesis

## Mediator Synthesis

- Since 1993: from **TL** specifications  
[DASFAA'94, PACT'96, PACT'97, SCT96, STTT97, FASE98, VISUAL98]
- Now: via **MC** and **POE** [SAS'96]
- Automatic Adaptation/Evolution
- **Safe Service Customization**,  
[Proc. IN'97, IEEE Communic. Soc. Workshop on Intelligent Networks]

## Mediator: Taxonomies

## SWS Mediation Modules

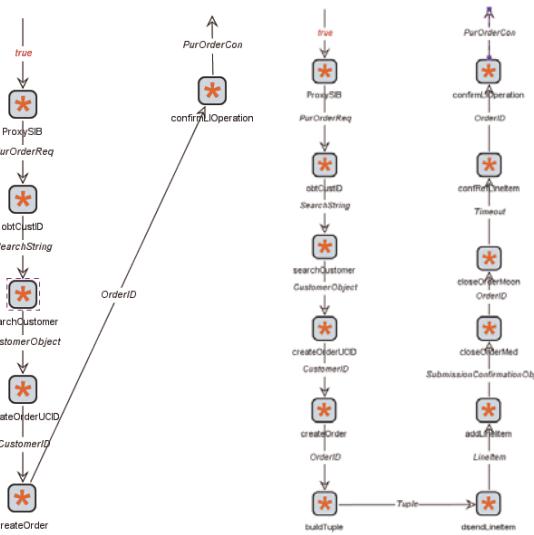

module name	input type	output type	description
Mediator	{true}	PurOrderReq	Maps RosettaNet messages to the backend
startService	PurOrderReq	SearchString	Receives a purchase order request message
obtCustomerID	CustomerObject	CustomerID	Obtains a customer id out of the customer object
createOrderUCID	OrderID	Tuple	Builds a tuple from the orderID and the POR
buildTuple	Tuple	LineItem	Gets a LineItem incl. orderID, articleID and quantity
sendLineItem	LineItem	SubmConfObj	Closes an order on the mediator side
closeOrderMed	OrderID	OrderConfObj	Receives a conf. or ref. of a LineItem and sends a conf.
confirmIOperation	OrderConfObj	PurOrderCon	The backend system
Moon	SearchString	CustomerObject	Gets a customer object from the backend database
searchCustomer	CustomerID	OrderID	Creates an order
createOrder	LineItem	SubmConfObj	Submits a line item to the backend database
addLineItem	OrderID	TimeoutOut	Closes an order on the backend side
closeOrderMoon	TimeOut	orderConfObj	Sends a conf. or ref. of a prev. subm. LineItem

T. Margaria, B. Steffen

3gERP, 17.11.2008

## Mediator: Solutions

startService < PurOrderCon  
startService  
< Lineitem  
< confRefLineitem  
< PurOrderCon

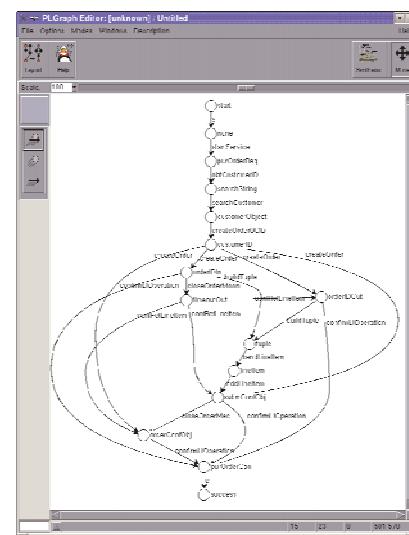

T. Margaria, B. Steffen

3gERP, 17.11.2008

## Mediator: Solutions

startService < PurOrderCon  
(minimal)

T. Margaria, B. Steffen

3gERP, 17.11.2008

# Overview

- Enterprise Physics
- The Mediation Scenario
- Handling Evolution
- Observations

T. Margaria, B. Steffen

3gERP, 17.11.2008

# Evolution

- The **process** changes
- The **environment** changes
  - Platform Migration
  - Backend Extension

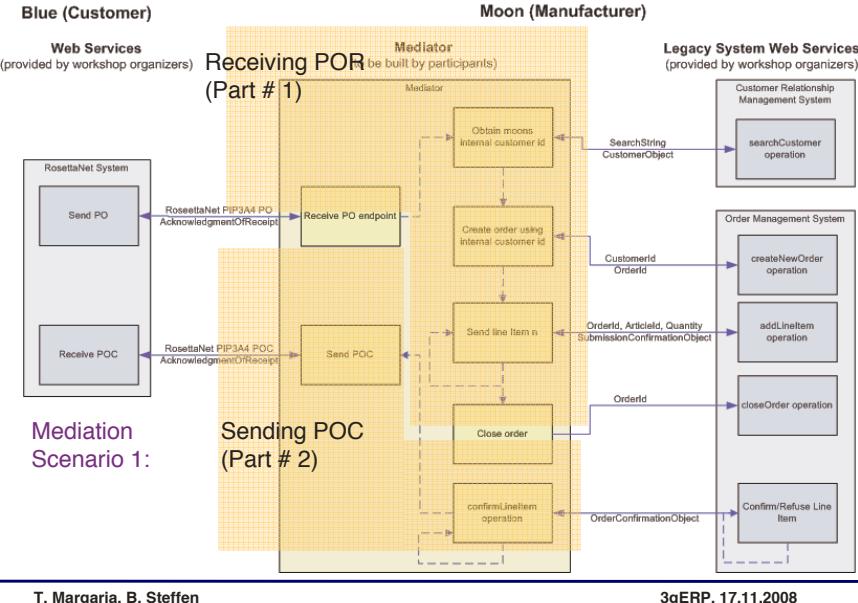

**Heterogeneity** increases.

T. Margaria, B. Steffen

3gERP, 17.11.2008

## Process Evolution

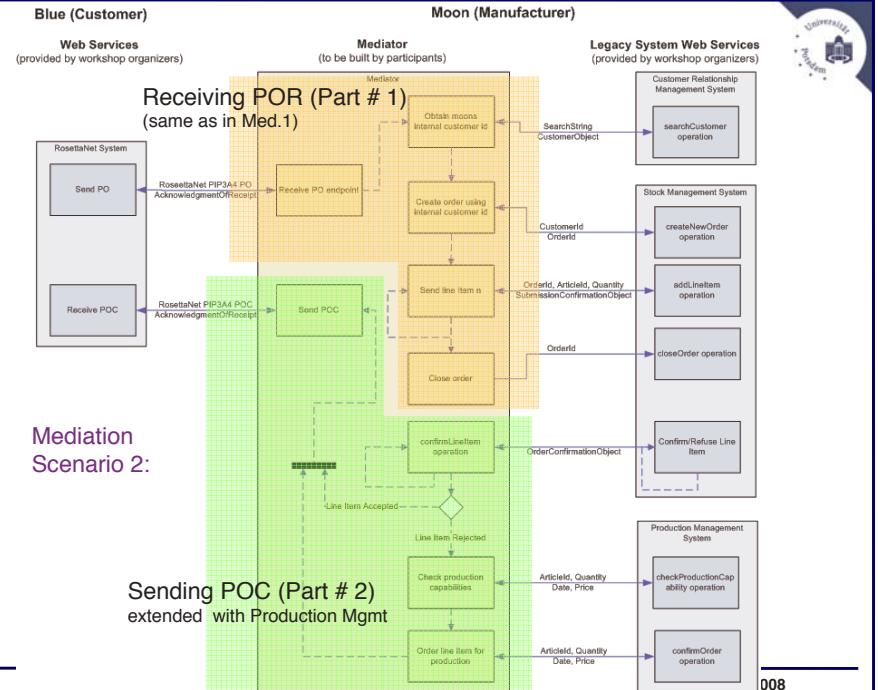

T. Margaria, B. Steffen

3gERP, 17.11.2008

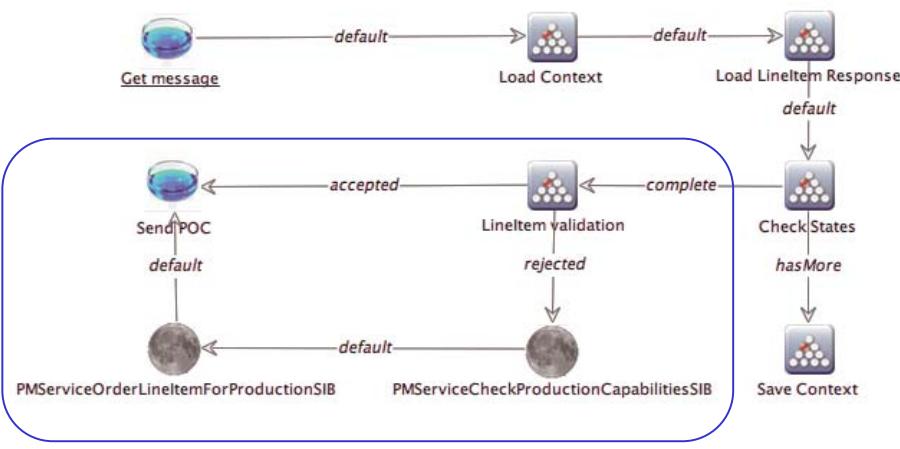

Blue (Customer)

(provided by workshop organizers)

008

# Mediator Service with Production Management

T. Margaria, B. Steffen

3gERP, 17.11.2008

## Evolution

- The process changes
- The **environment** changes
  - Platform Migration  
(Moon gets another Backend)
  - Backend Extension  
(Moon enhances its Backend)

Heterogeneity increases.

T. Margaria, B. Steffen

3gERP, 17.11.2008

## ES Bundle – Order to Cash

The ES Bundle Order to Cash ...

- ...enables customer and partners to build individual composite applications on top of existing Order-to-Cash processes. **ERP 6.0 EnhPack 2 and higher**
- ... allows collaboration and data exchange with customers as well as collaboration within corporate groups at lower TCO. **ERP 6.0 EnhPack 3 and higher**

### Business Value

- Build individual composite applications for Order to Cash process to fulfill specific needs of Sales and Customer Service department
- Set up B2B connection to customers at lower TCO. Reduce time and cost of onboarding new customers.

### Use Cases

- Build individual Cockpits for B2B customers, sales, customer service agents and warehouse clerks. Example: Fast Sales Order Entry, Order Tracking
- Integrate 3rd party software in existing Order-to-Cash process to streamline the Order-to-Cash process

## Service and BO Replacement

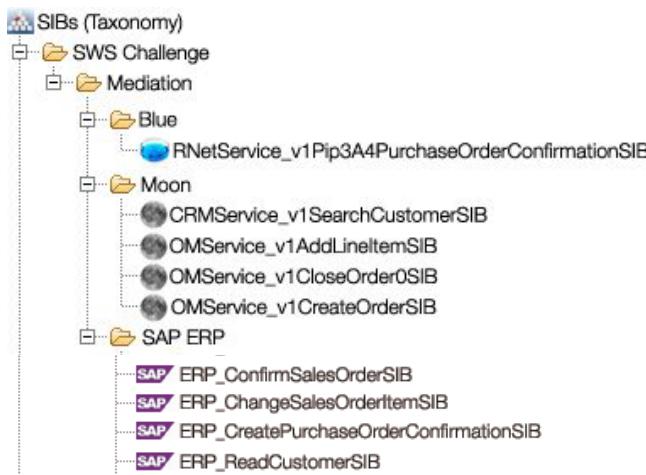

MOON SERVICE	SAP ENTERPRISE SERVICE
Search Customer	Read Customer
Create Order	Create Sales Order
Add LineItem	Change Sales Order Item
Close Order	Confirm Sales Order
Confirm/Refuse LineItem	Create Purchase Order Conf.

Table 1. The Service replacement map for Moon's new ERP backend.

SAP ENTERPRISE SERVICE	BUSINESS OBJECT
Read Customer	Customer
Create Sales Order	Sales Order
Change Sales Order Item	Sales Order
Confirm Sales Order	Sales Order
Create Purchase Order Conf.	Purchase Order Conf.

Table 2. The Business Objects replacement map for Moon's new ERP backend.

# Adding the new ERP services

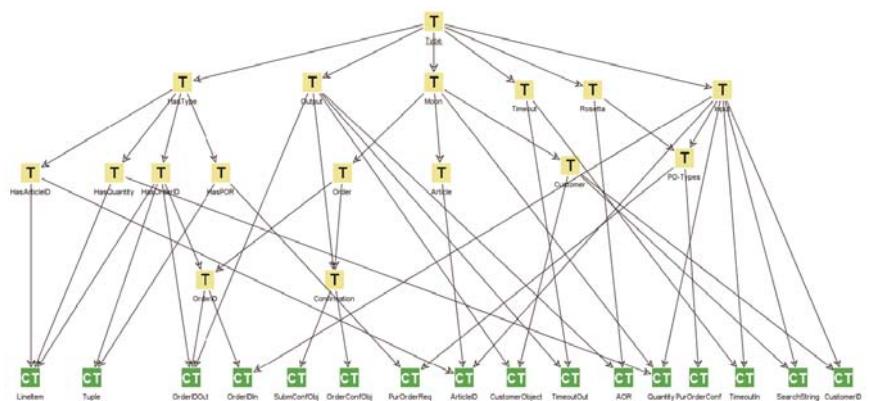

T. Margaria, B. Steffen

3gERP, 17.11.2008

# Platform Migration Scenario

- Same Type Taxonomy

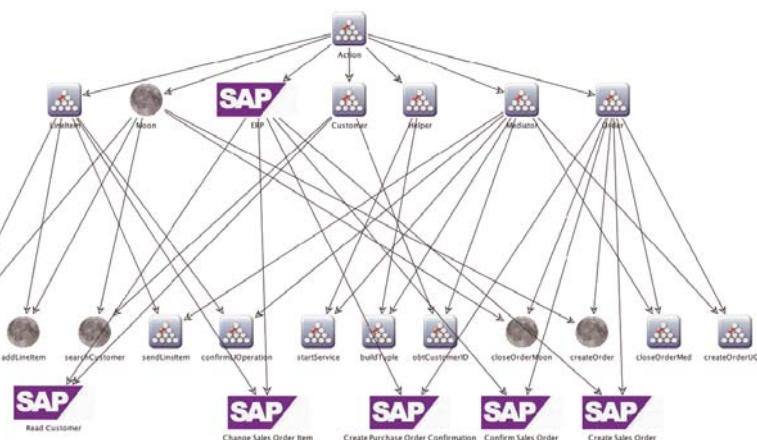

T. Margaria, B. Steffen

3gERP, 17.11.2008

# Platform Migration Scenario

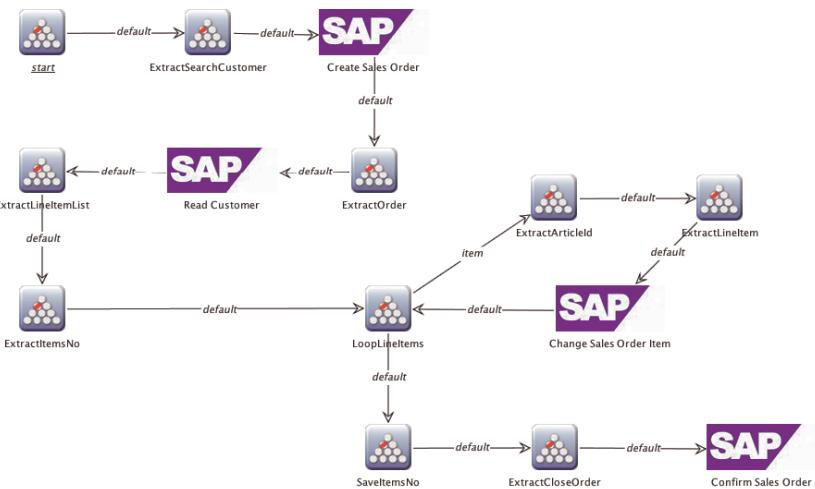

- Extended Action Taxonomy

T. Margaria, B. Steffen

3gERP, 17.11.2008

# Mediation Process after Platform Migration

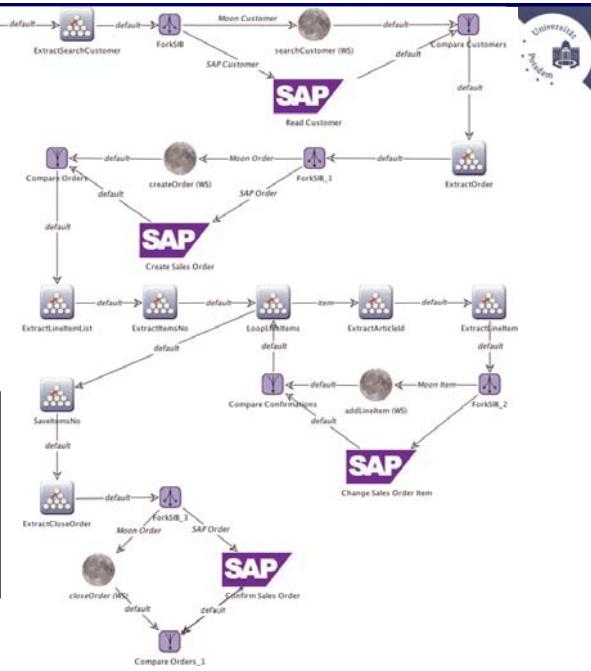

T. Margaria, B. Steffen

3gERP, 17.11.2008

## Moon's Backend Extension

**Business policy:**  
*"Customers, orders, and confirmations must successfully match".*

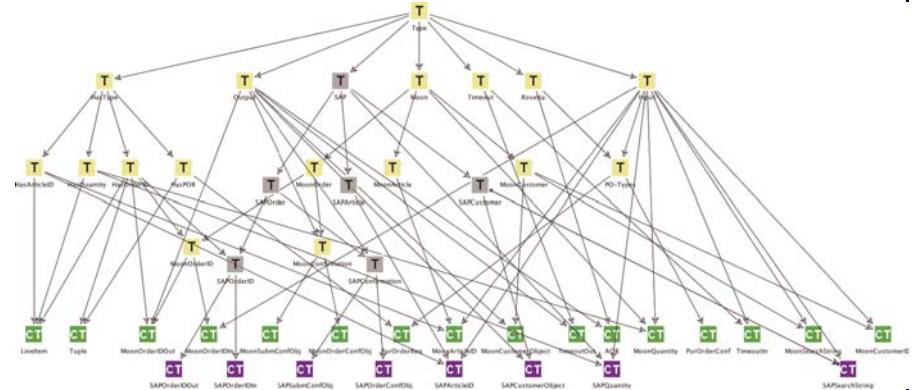

T. Margaria, B. Steffen

3gERP, 17.11.2008

## Extended Type Taxonomy

- ERP-Related Instance Types
- Concept Types

T. Margaria, B. Steffen

3gERP, 17.11.2008

## Observations

- Data issues  
 BO vs. programming objects, XML vs. Java, Parlay-X
- Orchestration issues  
 in the discovery, synthesis appeared late, if at all
- Domain modelling  
 static, dynamic, and how?  
 Preconditions, effects on service, data item, composition
- Tangling (no best decomposition!)
- Theory vs. practice (in theory, it works...)

T. Margaria, B. Steffen

3gERP, 17.11.2008

## User-Centric Modelling

- User Focus
- User Control
- User Satisfaction

*Driving a car needs no engineer!*

T. Margaria, B. Steffen

3gERP, 17.11.2008 36
